

Trustworthy Predictive Maintenance (TPdM)

Coordinator organization: Chalmers University of Technology, Department of Industrial and Materials Science

Start 2022 September 30
End 2025 September 29

Mohan Rajashekarappa

*Ph.D. Student in Production Systems Division,
Department of Industrial and Materials Science,
Chalmers University of Technology

**Advanced and innovative
digitalization 2022**

Agenda

- Industrial challenge
- The scope of the TPdM
- TPdM concept
- Vision and the goals of TPdM
- Collaboration in TPdM
- TPdM implementation
- Dissemination plan

Industrial challenge

Trusted Artificial Intelligence in Manufacturing: A Review of the Emerging Wave of Ethical and Human Centric AI Technologies for Smart Production

Emphasis is put on dynamic human-in-the-loop scenarios, where ethical, transparent, and trusted AI systems co-exist with human workers!

Ethical and Human Centric AI Technologies for Smart Production", Boston-Delft: now publishers, <http://dx.doi.org/10.1561/9781680838770>

Industrial data reliability

Responsible and transparent artificial intelligence systems

Reliable AI deployments in production lines

Industrial challenge

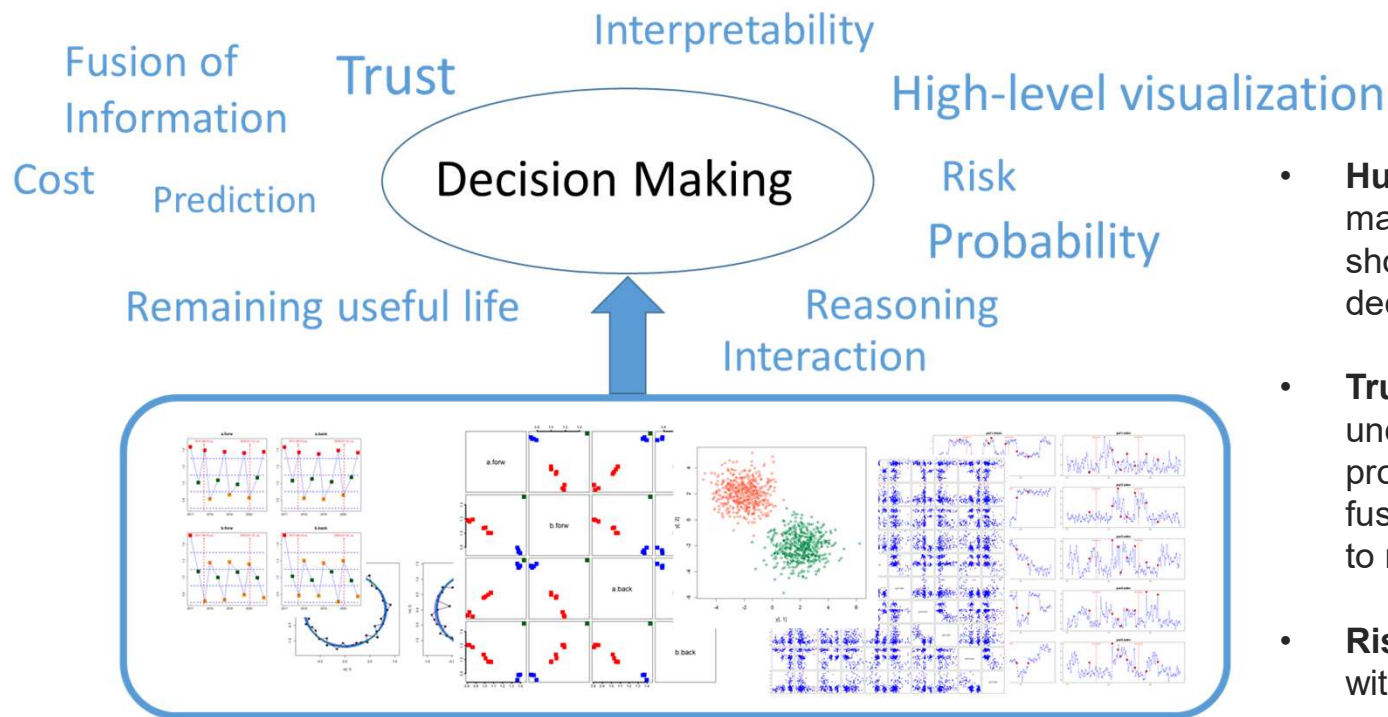

As also identified from the state-of-the-art*, there are still some challenges in Predictive Maintenance (PdM) solutions:

- *“PdM solutions need to provide clear, actionable, and comprehensible maintenance decisions”.*
- *“The output of PdM systems must be actionable decisions and solutions on the asset” .*

*Al-Najjar, B., Alexopoulos, K., Hribrenik, K., Surico, M., Nikolakis, N., Keraron, Y., ... & Makris, S. (2021). Predictive maintenance technologies for production systems: A roadmap to development and implementation.

The scope of TPdM

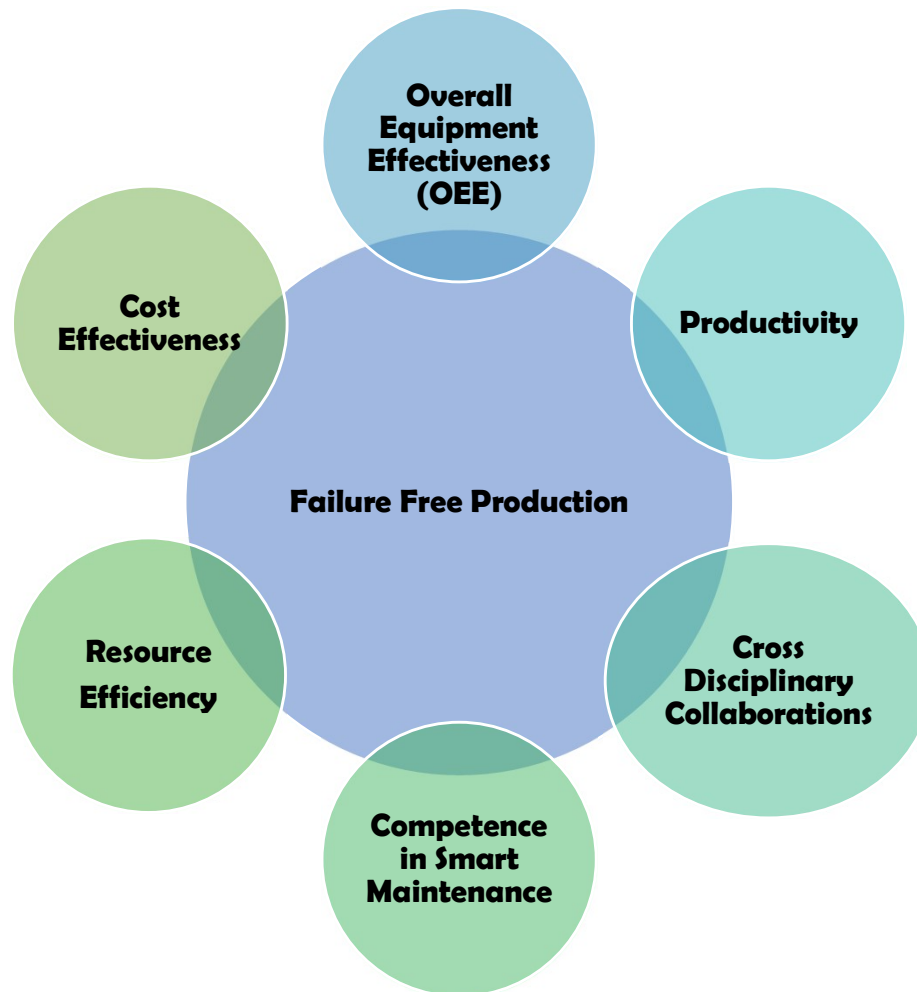

- **Human in the center** of the decision-making – information from the data analysis should be highly supportive of the given decision
- **Trustworthiness** – all involved uncertainties regarding the decision problem should be taken into account and a fusion of data sources should be performed to minimize uncertainty
- **Risk/utility** should be modeled together with the uncertainty in the decision problem

TPdM concept

- TPdM project aims to design **human-centric decision support prototypes** for PdM to achieve actionable decisions
- **Iteratively deploying** working prototypes for on-site and online analysis
- **Interpretable data analysis** based on **multiple information sources** and **modeling uncertainties** (e.g., Bayesian statistical data analysis)
- It contributes to **technical focus areas**:
 - “Datadriven utveckling och säkert utbyte av data mellan processer och aktörer”
 - “End-to-End AI i utveckling, produktion och tjänster”.

Vision and the goals of TPdM

- PG1. Develop a proof-of-concept implementation that illustrates the predictive performance of the developed algorithms;
- PG2. Identify a requirement specification for prototypes of the TPdM decision support system;
- PG3. Develop a proof-of-concept demonstrator for proactive maintenance recommendations;
- PG4. Develop industrial demonstrators of high-level visualization solutions for PdM decision-making;
- PG5. Develop pedagogical and lifelong learning materials
- PG6. Publish the designed models for the TPdM in high-impact journal articles

Collaboration in TPdM

AB Volvo, AB SKF, and Husqvarna Group

- Industrial use case and domain expertise for PdM development

Siemens AB

- Technical expertise & knowledge in online data collection and connectivity solutions

Capgemini AB

- Extensive expertise & knowledge in digital transformation and data-driven solutions to be operationalized in the industry

University of Skövde

- Research group - Artificial Intelligence Lab (SAIL)
- Applied AI/data science in different application areas
- Research group - Intelligent Production Systems - Optimization and data analytics, as well as learnings from an ongoing project in PdM

Chalmers University of Technology

- Research group - Production Services & Maintenance Systems - Smart Maintenance and industrial data analytics/AI

Industrial use cases in brief

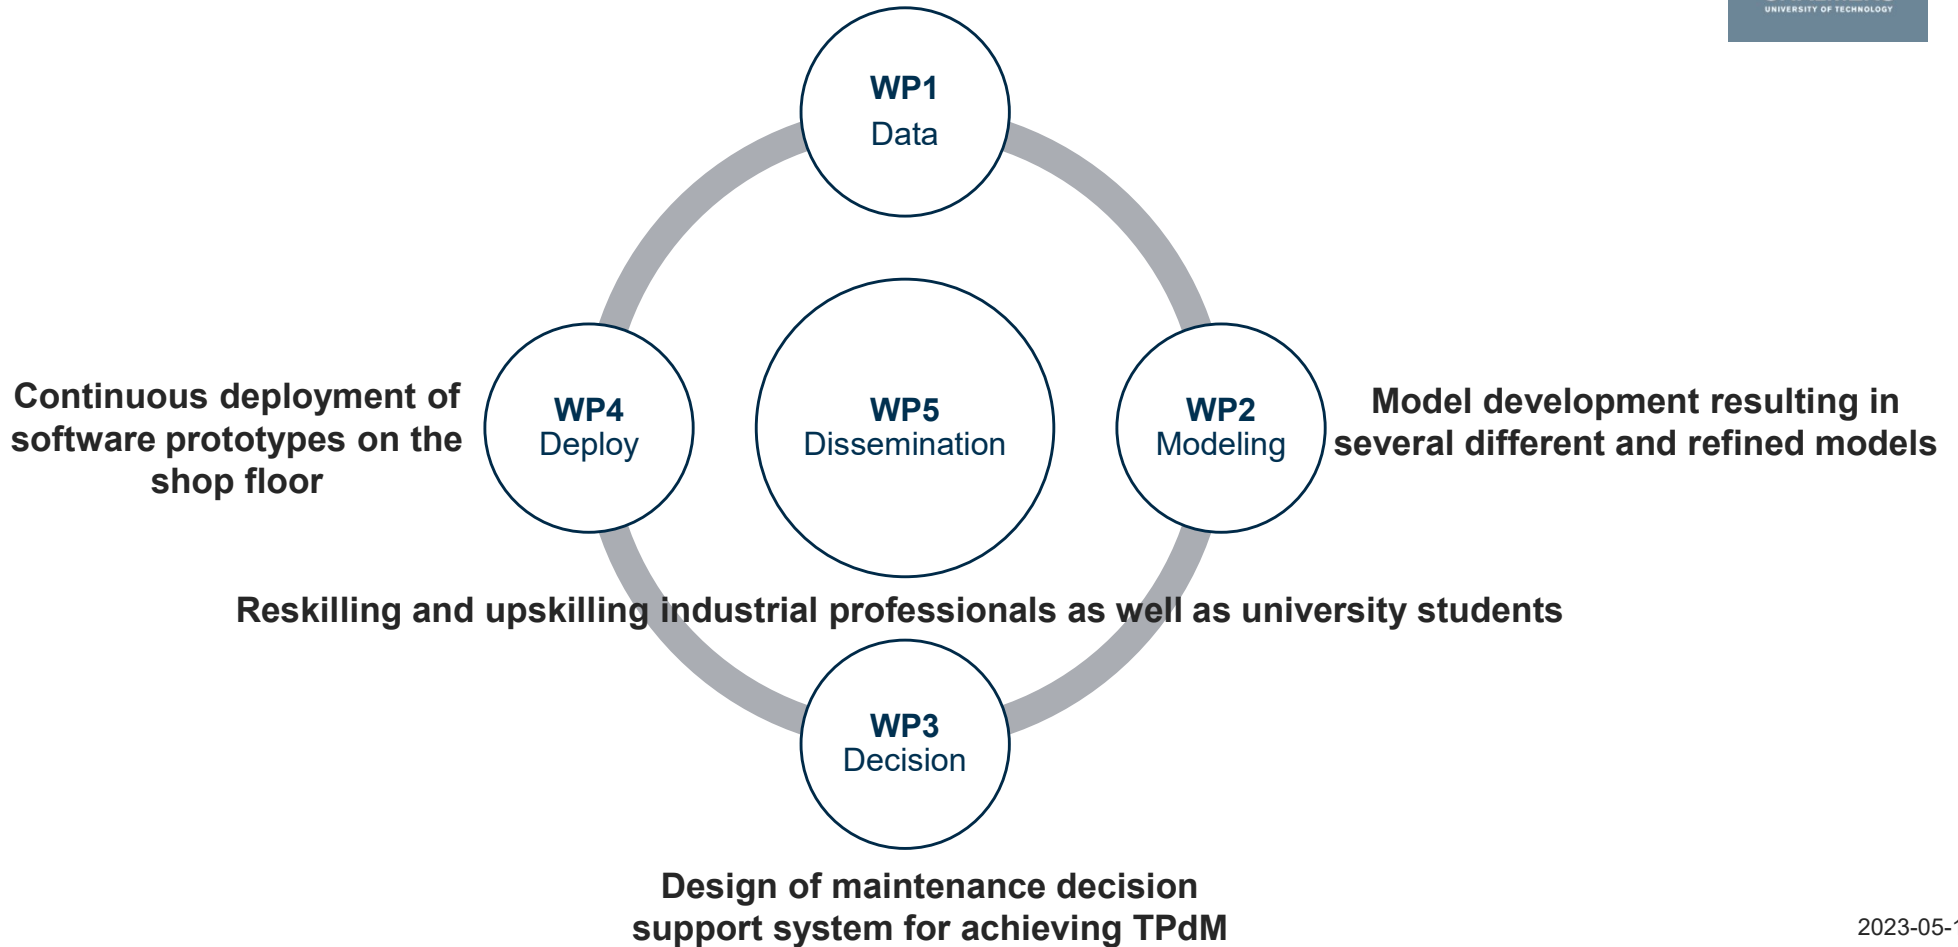

- AB Volvo
 - **Analysis of the degradation pattern and fault diagnosis of the ball screw system**
 - **Spindle bearings remaining useful life (RUL) estimation**
- AB SKF
 - **Implement a condition monitoring and predictive maintenance system for machining fluids in the bearing ring production.**
- Husqvarna Group
 - **Implement a condition monitoring and predictive maintenance system for die-casting machine.**

TPdM implementation

Review of data and patterns

Expected results

- Identified model road maps
- Models and methods for trustworthiness in PdM
- Designed software prototype for TPdM
- Deployed TPdM prototype
- Dissemination materials (e.g., pedagogical and life-long learning materials)

Dissemination plan

- Regular collaborative meetings
- Technology workshops (open to the Swedish industry)
- External dissemination through Sustainability Circle business networks, Swedish Maintenance Community, and the Swedish Maintenance Fair
- Scientific dissemination in the form of publications
- The project results will be incorporated into master's level course materials
- Additional funding for education and life-long learning materials (“nuggets”)
- General public dissemination
- Create dissemination packages (slide shows) for consultancy costumers

Thank you!

- VINNOVA Avancerad och innovativa digitalisering for their research grant!
- All our valued partners in TPdM project!
- All for your listening!
